EDUCATION

RV College of Engineering, Bengaluru

B.E. in Electronics and Communication Engineering

CGPA : 8.73

SKILLS

- Microcontrollers: STM32,MSPM0G3507 (Texas Instruments) , ESP32,Raspberry Pi
- Tools & Frameworks: STM32CubeIDE, Keil, OpenCV, Git, MATLAB,Fire base
- Database: SQL, Database Management Systems (learnt via external certification/tutorials)
- Concepts: ADC, SPI, UART, PWM, CAN, Signal Processing
- AI/ML: Image denoising, basic neural networks, CNN,OpenCV

LANGUAGES

- C++
- Python
- MATLAB
- Embedded C

PROFILE

Passionate and solution-driven Electronics and Communication Engineering student at RV College of Engineering, with strong experience in embedded systems, microcontroller programming (STM32, Arduino,esp32), and vehicle-to-vehicle (V2V) communication technologies. Skilled in C++, Python, OpenCV, and machine learning, with hands-on project work in real-time data processing, signal acquisition, and intelligent automation. An active contributor to Helios Racing’s BAJA SAE initiatives, seeking opportunities to apply cross-disciplinary skills in embedded AI, automotive electronics, and robotics.

PROJECTS & TECHNICAL WORK

- Vehicle-to-Vehicle Communication System**
 - Built a prototype for inter-vehicle communication using ESP32 and LoRa modules.
 - Implemented message passing for alerts like obstacle detection and braking status
 - Used interrupt-based design for low-latency communication.
- SmartNoise Filter - AI-Powered GUI Tool**
 - Developed a GUI in Python,Java that detects and removes noise from uploaded images.
 - Used Gemini AI for image processing and integrated ML-based auto-denoising.
 - Featured side-by-side comparison and download functionality.
- Deepfake Audio Detection using Machine Learning**
 - Extracted MFCC features and trained classification models to distinguish fake vs real speech
 - Used libraries like Librosa, Scikit-learn, and PyDub for audio preprocessing and analysis.
- Automated Farming Rover**
 - Designed a manually configured rover to calculate the number of rounds required to cover a rectangular agricultural field

TECHNICAL INTERESTS

- Embedded Systems & Automotive Electronics
- Analog Circuit Design (BJTs, MOSFETs, Power Amplifiers)
- Digital Signal Processing (DSP)
- Hardware-Software Co-Design using Verilog & FPGA (ADDC)
